

collect_balmore_input

```
graph TD; A[collect_balmore_input] --> B[convert_demands]; A --> C[clustering]; C --> B; B --> D[all];
```

The diagram illustrates a workflow starting with 'collect_balmore_input' (yellow dashed oval). From this node, two arrows branch out: one goes directly to 'convert_demands' (red dashed oval), and the other goes to 'clustering' (cyan dashed oval). From 'clustering', an arrow points to 'convert_demands'. Finally, an arrow points from 'convert_demands' to 'all' (green dashed oval).
