

collect_balmorel_input

```
graph TD; A[collect_balmorel_input] --> B[cluster]; A --> C[convert_parameters]; B --> C; C --> D[all];
```

The diagram illustrates a four-step process. It begins with a yellow dashed oval labeled 'collect_balmorel_input'. From this oval, two arrows originate: one points to a red dashed oval labeled 'cluster', and the other points to a green dashed oval labeled 'convert_parameters'. An arrow also points from the 'cluster' oval to the 'convert_parameters' oval. Finally, an arrow points from the 'convert_parameters' oval to a cyan dashed oval labeled 'all'.
